1. DESIGNATION AND OPERATIONAL PRINCIPLE

The bio resonance apparatus Zapper S5-AUTOMATIC (referred to as Zapper*) is digital electronic device that kills the parasites, bacteria and viruses which cause diseases via electromagnetic waves while following the operational principle of bio- resonance without the use of any medications whatsoever.

The present method was discovered by doctor Royal Raymond Rife as early as in the 30-ies of the 20th century. Because of one reason or another his invention remained forgotten until doctor Hulda Clark published the results of her research works in the book “Treatment of all diseases” based on the theories presented by doctor Rife. Zapper provides for effective treatment of acute, as well as of chronic diseases, whose aetiology and pathogenesis are strongly impacted by the parasites, bacterial and viral infections.

The device could be individually operated at home, as well as in the offices for physiotherapy of the hospitals.

During the therapeutic session, the patient is connected to the Zapper via a pair of electrodes that could contact both hands or both legs, as well as get diagonally connected between a hand and a leg.

The electromagnetic fluctuations thanks to their special shapes and frequency while being transmitted to the patient have several impacts onto the organism:

- Anti-parasitic – it neutralizes bacteria, viruses and intestinal parasites as a result of the resonance effects;
- Anti-parasitic – it neutralizes bacteria, viruses and intestinal parasites as a result of the resonance effects;
- Organ-stimulating – it improves the functions of various organs and systems of the human organisms.
- It has strengthening impact onto the whole organism.
- It has stimulating impact onto the immune system.
- This way rendering it more resistant to future parasite attacks.
- It visibly improves the body tonus
- It improves memory and brain activity.
- Another positive impact produced by the apparatus is about metabolism acceleration at cellular level (metabolism) thus cutting down cases of obesity and overweight patients.

* The appellation “Zapper” originates from the English verb zap – hit, bring down, kill, and “zapping” means the process of selective elimination of pathogenic organisms via electromagnetic waves.
2. TECHNICAL CHARACTERISTICS.

3. OPERATIONAL GUIDELINES

Before use unpack the device. If it was taken from the outside where temperature was low, leave it at ambient temperature for at least one hour before switching it on, in order to prevent its damage or malfunctioning.

The battery compartment is located at the rear side of the device (figure 1). Press it down (1) and draw (2) the compartment cover. Draw the battery clips (figure 2) and put inside the new 9 V battery of the 6F22 or 6LF22 type. Be careful when placing the battery. It has broad negative and narrower positive electrode (figure 3).
The battery clips has contacts with the same shape and sizes. Orient the battery towards the clips according to figure 4 and press them until locking up (figure 5).

Put the battery inside the battery compartment (figure 6) and press it down. Put the cap on (figure 7) and press it in the sequence shown on figure 8.
The battery quality is essential to increasing the number of treatment sessions that could be performed until the full exhaustion of its capacity. If you do not intend using the device for long period, take the battery out in order to prevent electrolyte leakage and the consequent damages.

Figure 9 shows the management and indication bodies.

Figure 9 Facial panel of the device.
1- Indicator for electrode contact; 2 – cycle indicators; 3 – pause indicator; 4 – switch on and switch off button; 5 – battery status indicator.

The device is switched on while pressing the button 4 (I/0). If you have accurately placed the battery, the indicator above the button will light up showing the device is switched on and you will hear short intermittent sound. The indicator on electrode contact condition 1 (ELECTRODES) will be constantly lit.

Grasp the electrodes with two hands or grasp one electrode with one hand and place the bare foot of the opposite leg onto the other electrode. If the electric contact with the electrodes is good, indicator 1 “ELECTRODES” will go down and the indicator for cycle 1 will start blinking showing that the device operates in the first cycle. If during the contact with the electrodes the device does not automatically get in operational regime for the first cycle, this indicates the skin is dry and does not conduct sufficient electricity. In order to improve the contact, slightly moisten hands’ skin.

The power of the running electricity is limited to safe values. During the session you would not feel skin irritation or muscle spasms. This is possible only in the case of people with increased sensitivity.

Holds the electrodes until the end of the operational cycle. After the cycle end you will hear short intermittent sound. The indicator for cycle 1 will go down and indicator 3 will start blinking “PAUSE”. During the pause you could leave the electrodes. After the end of the pause, you will hear sound indicating he beginning of the second cycle and so on.
ELECTRODES SHOULDN'T TOUCH EACH OTHER! THIS WOULD CAUSE BATTERY’S RAPID EXHAUSTION.

The battery condition indicator 5 (Batt Low) lights up when it is discharged under critical level and should be replaced with a new one. Indicator lighting up during a session does not mean the session is to be interrupted. The remaining battery charge is enough to keep working until the end of the session. In view of the next session the battery is to be replaced with a new one. During the battery replacement it is essential to use one of known make and origin.

In the case of low battery quality of unknown origin the operational regime and principle of the apparatus would be disturbed.

The device has three operational cycles with duration of seven minutes divided by two pauses of twenty minutes:

<table>
<thead>
<tr>
<th>Cycle 1</th>
<th>Pause 1</th>
<th>Cycle 2</th>
<th>Pause 2</th>
<th>Cycle 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>7 minutes</td>
<td>20 minutes</td>
<td>7 minutes</td>
<td>20 minutes</td>
<td>7 minutes</td>
</tr>
<tr>
<td></td>

<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

After the end of the first cycle, the device makes intermittent beep, the indicator for the first cycle switches off and indicator 3 („Pause”) switches on. In the next twenty minutes you could leave the electrodes away and wait. When the electrodes are not in contact with the body, indicator 1 („Electrodes”) would not switch on.
After the expiration of twenty minutes you could hear a beep showing the start of the second cycle. Indicator 3 („Pause”) switches off, and the indicator for the second cycle starts blinking. Catch the electrodes. If indicator 1 („Electrodes”) blinks, moisten hands’ skin to improve the contact.

After the end of the second cycle a second pause follows and so on. After the expiration of the third cycle you could hear a beep, then the device would automatically get switched off.

If you have to suspend the session for a while, you do not have to switch the device off. You should just let the electrodes off. The device automatically gets in sleep regime. You could terminate the operations of the device during each and every cycle, and the timeout time would not be considered. In order to keep working all you need to do is grasp the electrodes.

You could switch the device off while working after pressing the button 4 (I/O). Device switch-off results in zeroing the cycles reported until then. In the case of follow-up switch-on the session starts from the first cycle.

In order to run the sessions in effective manner, choose a suitable calm location – a bed, a sofa, or an armchair, away from the noise and sources of electromagnetic radiations (TV, microwave oven, mobile telephones) that could result in faulty operations of the device. Do not wear clothes made of synthetic materials. They create static electric charges that lower procedures’ effect.

4. MAKING IMPACTS

The impact course duration depends on the gravity and term of the diseases and it could take from 7 to 28 days with daily sessions. If necessary, the course could be repeated after a pause of two to three weeks.

In view of prophylactics one session per day should be undertaken for seven days. In the case of acute diseases the sessions could be repeated 2-3 times daily.
5. COUNTER-INDICATIONS

It is not recommendable to use the Zapper in the case of pregnant, breastfeeding women, children below 5 and people with cardio stimulators.

Essential organism clean-up

The impact caused by the device ZAPPER S5 AUTOMATIC**** provides you with the opportunity to get excellent results for short period of time. Mandatory prerequisite for achieving maximum effectiveness and support for the organism while using the device is the conformity with the following:
1. Keep in strict conformity with the operational guidelines of the device.

2. Maximum effect for organism clean-up and support for metabolic processes is achieved with the use of the product DR.SILVER (silver water device). This is guarantee for getting the dead parasites out of the organism and supporting the internal balances when it comes to the activity of useful microflora.

3. In the capacity of addition and even more comprehensive support for the organism to clean up and excrete the dead parasites. You could also add the herb troychatka (artemisia, walnut and clove). In-between the intake of silver water and troychatka you should leave 30-60 minutes’ pause.

6. DELIVERY SET

6.1 Bio-resonance machine “Zapper” S5 – AUTOMATIC 1 item
6.2 Battery – 1 item.
6.3 Technical description and operational guidelines – 1 item.
6.4 Package – 1 item.

7. WARRANTY TERMS AND CONDITIONS
The conformity with the rules contained in these guidelines is in the interest of the consumer and prerequisite for satisfying the warranty terms and conditions.

Bio-resonance machine “Zapper” S5 -AUTOMATIC was developed in conformity with the technical specification TC-GM-12-2010 and is in conformity with the technical documentation. The company manufacturer reserves its rights to make technical modifications in the device scheme, while
keeping all technical and functional characteristics of the
device.

The company manufacturer via its representative provides 36/twelve/-month warranty service as long as all terms and conditions for the accurate operation were satisfied.
In the case of claims concerning the device, you should present the warranty card.
If you have not conformed with the operational terms and conditions, the claim would not be considered and the repair of the device should be paid by the client. The company does not satisfy the claims in the cases where:
- Unauthorized persons attempted eliminating the defects;
- You have not conformed with the operational terms and conditions defined in this “Technical description and operational guidelines”;
- The suffered damages result from the inaccurate transportation;
- The buyer has not presented warranty card;
- The damage was caused by external chemical or physical factors during the operational term;
- The deviations in devices’ operations result from discharged battery.
After buying the device you should check the accurate filling in the warranty card where you should have put down the date of buying the device, factory number, signature laid by the seller and company’s seal. Keep the warranty card, it gives you the right to free repairs during the warranty term.
New unique function to the device 2 in 1 or the perfect couple Yin and Yang” electrical frequency impulses + electromagnetic field”.

The device works with electrical frequency impulses and electromagnetic field at the same time. The carried treatment programme, frequency and impulse from the electrodes are transferred in the electromagnetic field of the device. For the purpose, when you are in contact with the electrodes, during the séance, put the device (the backside of the device, which is marked with a stamp) on the affected spot, or organ which you would like to influence on.

The electromagnetic field does not work without the contact with the electrodes!!

This way the electromagnetic field pervades deep in the organism, to the diseased organ, the affected spot, the cavities, the intestinal content, where the electrical impulse pervades harder. Which automatically means that we have even more effective repercussion.
WARRANTY CARD

Appellation of the item: Bio-resonance machine “Zapper” S5-AUTOMATIC *****
ORIGIN: EU MANUFACTURER: IDELBULGAR
Manufacturer: IDELBULGAR Ltd

Consultant: .................................................................

Telephone: .................................................................

Client: ...........................................................................

Dated: ............................................................................

Factory number: ...........................................................

Address of the shop ..........................................................

Tel: ..............................................................................

Warranty term – 36 months as of the sales date, as long as you have conformed with the rules for operating the device. The warranty would be void in the case of established mechanical defects inflicted during inaccurate storage and operation, as well as in the case of established and attempted unauthorized repairs and setup.
